8. Notice of Motions

8.1. Cr Michael Scott - Covid 19 Vaccine Contamination

Notice of Motion from Cr Michael Scott

Previous Decisions: Nil

Motion

Moved Cr Michael Scott

That Council:

1. **Acknowledge and thank Port Hedland Council and Councillor Camillo Blanco for the correspondence received since October 2024 concerning reports of DNA contamination in Pfizer and Moderna mRNA vaccines.**
2. **Advocate on behalf of the Alexandrina community, to urgently request that the Federal Government commission a thorough and independent investigation into all safety aspects - including synthetic DNA contamination issues - in the Pfizer and Moderna mRNA Covid-19 vaccines administered in Australia, and to communicate findings transparently.**

   Specifically, by writing to the Prime Minister and Federal Minister for Health and Aged Care and forwarding copies of those letters to the SA Premier and State Health Minister as well as the Federal Opposition Leader, the Federal Opposition Health Spokesperson, the SA Opposition Leader and Opposition Health Spokesperson.
3. **That a modified version of this motion be placed on the agenda of the next Local Government Association of SA meeting for consideration and if carried, then it be sent to a subsequent Australian Local Government Association meeting for national endorsement.**

Background as presented by Cr Michael Scott

In 2020 a worldwide pandemic was declared concerning the newly emerged Covid-19 virus.

It is well remembered and acknowledged that the emergence of Covid-19 in 2020 was a shocking and fearful phenomenon for the majority of the world's population. It seems likely that most Government and Health leaders acted in good faith in responding to the events of the time including our own Federal, State and Local governments and health officials.

The ensuing history of the virus and the way in which it was responded to in Australia is well documented and remembered with the application of several intended control measures including widespread administration of mRNA vaccines.

Unfortunately, the subsequent benefits or otherwise of the measures used to combat Covid-19 have been somewhat contentious in Australia and globally.

In mid-2024 scientific research conducted by researcher Dr David Speicher and others revealed levels of DNA contamination in Pfizer and Moderna mRNA vaccine vials well in excess (up to 145 times) prescribed regulatory levels.

On October 11th, 2024, Port Hedland Council passed a motion in support of actions by Federal MP Russell Broadbent to bring to the attention of the Australian Federal Government and related health authorities the recently revealed scientific evidence of hazardous levels of DNA contamination in some Moderna and Pfizer Covid mRNA vaccines administered to Australians since 2020.

The Port Hedland Council's motion also included several other actions including informing every Municipal Council and every individual elected Councillor in Australia of that scientific evidence and urging them to join in widespread positive action.

As per the documentation supplied by Cr Camillo Blanco the significantly hazardous issue with DNA contamination in mRNA shots is that:

"Excessive synthetic DNA encapsulated in lipid nanoparticles can integrate into human cells, potentially leading to genomic instability, cancers, immune system disorders, and adverse heredity effects"

Following the initial correspondence from Cr Blanco and the Port Hedland Council Alexandrina Councillors have received numerous letters and follow up information from Cr Blanco detailing further actions of MP Russell Broadbent, TGA responses and further related actions in Australia and globally concerning the DNA contamination issue.

At the Dec 2024 Alexandrina Council meeting Mr Royden Rogers of Mount Compass and local GP, Dr. Vikki McLaughlin gave a presentation explaining the potential health implications of DNA contamination in mRNA vaccines. Dr. McLaughlin also provided a personal perspective of disturbing ill effects observed following administration of Covid-19 vaccinations in some of her patients as well as expressing her concerns regarding potential long term and inter-generational effects.

The scientific and anecdotal evidence of negative health issues and death correlated to the administration of Covid-19 mRNA vaccines is concerning to many in our community and across Australia. However, without concerted and focused research and investigation into this issue, ill health as well as concerns and fears of community members will remain unresolved.

This motion aims to have our Council advocate for the Alexandrina community, to join others in calling for a thorough national investigation into potential health risks associated with the widespread administration of Covid-19 mRNA injections, to identify and quantify any problems, and to seek remediation health solutions where necessary.

These actions could provide answers, certainty and health solutions to our community, as well as demonstrating our commitment to and care of our people.

As such, I commend this motion to Council and urge your support for it.

Administration comments

Responsible Officer: Andrew MacDonald (Chief Executive Officer)

Council conducts immunisation programs for the Japanese Encephalitis and Meningococcal B vaccines to eligible groups. It does not provide COVID-19 vaccinations.

Notwithstanding that Council is not a direct service provider, consistent with Section 6 of the *Local Government Act 1999,* where is considers it appropriate, it can advocate to represent the interests of, and encourage and develop initiatives for improving the quality of life of, its community.

Time taken to prepare Officers' comments was 30 minutes.
