Presentation to Bundaberg Regional Council 14/5/2025

Good Morning Ladies and Gentlemen. My name is Hans Jakobi and my purpose here today is to raise awareness of an ongoing risk to the Health and Safety of Bundaberg Region residents and to enlist your support in calling for a thorough investigation into the documented DNA contamination in mRNA injections with higher tiers of government.

I ask that you consider the facts that I present to you and not let your personal beliefs about this issue or about the messenger cloud your judgement, since this is something that affects every one of us, *including you, your children and subsequent generations*.

This is not something trivial to be dismissed on a whim.

I understand that you have received information about DNA contamination in Covid injections from the Port Hedland Council which brought this to public attention in October last year. At this time, 15 Councils around Australia have advocated for their communities and the momentum continues to build for further Councils to do the same, so you'll be in good company. The Limestone Coast Local Government Association has also passed a motion calling for an investigation.

This problem is not just limited to covid injections. mRNA technology is used in flu and a growing number of other injections administered to adults AND children in our Council area.

Firstly, let me point out that **this is not a Pro Vax versus Anti Vax message** because we are all affected by this, whether we have been vaccinated or not.

Secondly, let me assure you that you do not need any medical expertise to understand this issue and I will do my best not to bombard you with technical information. I'm not a medical expert, so I will explain our community's concerns in layman's terms. My intention is to have you understand that there is a problem and to enlist your advocacy for our community to have this investigated.

Thirdly, let me remind you that the Health and Safety of our community ***is*** a local government concern and apart from this being specifically addressed in the Local Government Act 2009 and the Public Health Act 2005, the Bundaberg Council already supports specific health initiatives such as:

- Be Active Be Alive
- Parkrun
- Move it Expo

The Bundaberg Regional Council website clearly states: “Council has jurisdiction to act on certain public health risk issues described under the Public Health Act 2005.

In accordance with the Act, a public health risk can be anything that is, or is likely to be hazardous to human health”

Furthermore, you have recently demonstrated your strong concern for the Public Health and Safety of our community with the demolition of the Moore Park Surf Life Saving Club because of the risk of asbestos contamination by providing hundreds of thousands of dollars for the demolition of a building which you did not own, on land which did not belong to the Council. I completely support and thank you for your decision to protect our community with this decision.

I’m not privy to the exact cost of this demolition, however, you’ll be pleased to know that during this time of fiscal restraint, the cost to the Council of advocating for our community in the way I am requesting, will cost very little time and money.

In the light of your previous positive actions for the health and safety of our residents, it would be ***hypocritical*** for this Council to continue to turn a blind eye to the issue I am drawing to your attention today. Your Council is the tier of government that is closest to our community and you have a duty to advocate for your community to higher tiers of Government on matters of Health and Safety.

The science is **never** settled and we should always continue to question, test and research the data, in order to improve matters for our community. In fact, that was generally the case until the advent of Covid when the government appointed itself as the *only* source of reliable information.

Thalidomide was a widely used drug in the late 1950s and early 1960s for the treatment of nausea in pregnant women. Unfortunately the severe birth defects in thousands of children were initially ignored and ridiculed. It was only after a thorough investigation was conducted, that it was discovered that the clinical trials for this drug had been falsified and thereafter it was no longer prescribed for pregnant women.

Health concerns about the safety of asbestos were recorded more than 2,000 years ago in Roman times. Despite growing safety concerns around asbestos emerging in

Australia in the 1960's and 70's it wasn't until December 2003 that Australia implemented a total ban on asbestos and products containing asbestos.

Let's not wait 2,000 years to investigate this issue!

Ladies and Gentlemen, with a capacity to carry more than 500 passengers, the Airbus A380 is the largest commercial passenger plane in the world.

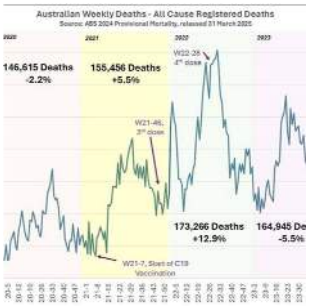
Imagine if every week two Airbus 380 planes crashed in Australia, killing all of the passengers.

Would there be an investigation to find out why this is occurring?

Probably the media would be all over it.

Politicians would be screaming for a thorough investigation.

Would *<u>you</u>* Ladies and Gentlemen, be sufficiently concerned to call for an investigation into the cause of these deaths?



Let me show you the Government's official figures from the Australian Bureau of Statistics which show that approximately 1,000 people more a week are dying on average than prior to 2020.

Do you realise that more people have now died since the advent of mRNA injections, than died in both world wars combined?

According to the Australian War Memorial website, 103,044 Australians died in **ALL** conflicts. Since the introduction of the mRNA injections in 2021, there have been 143,220 excess deaths according to the Australian Bureau of Statistics figures.

This is a very serious issue that continues to affect members of our community.

Ladies and Gentlemen, that's why I, on behalf of our community, am asking you to advocate for a thorough investigation to be carried out immediately, into the effects of the mRNA injections.

Recent research by Dr David Speicher of Canada, reveals excessive DNA contamination in Moderna and Pfizer vaccinations administered to millions of Australians including most of the 100,000 residents in the Bundaberg Region.

The levels of DNA contamination exceed the Therapeutic Goods Administration regulated amounts by between 7 and 145 times the legal level. Synthetic DNA contamination at these levels should not be in vaccines. Nor should the SV40 enhancer be in there that is also in the Pfizer vials.

Dr Speicher's findings of DNA contamination in Australian vials mirror what has been reported by researchers in Germany, Canada, the USA, France including more recently vials sourced from Ireland and Slovakia. There are now more than 50 eminent scientific, medical and legal minds from around the world who attest to the validity of these studies.

This research establishes that: *Excessive synthetic foreign DNA encapsulated in lipid nanoparticles can integrate into human cells, potentially leading to genomic instability, cancers, immune system disruption, and adverse hereditary effects*.

Even though this information was emailed to every Councillor in this room in October last year, no action has yet been taken on this matter.

According to Biologist, Biochemist and Immunologist, Jessica Rose PhD: “There is no safe amount of DNA that you should transfer to a cell via these lipid nanoparticles. There is no safe amount. Especially considering the fact that one of the fragments of DNA is the SV40 promoter/enhancer which is absolutely functional as a gene therapy tool.”

In other words, these mRNA injections literally change our DNA!

I often hear well-meaning people compare mRNA injections to the vaccines we received in the past. This is not a valid comparison because mRNA injections are a <u>completely different</u> technology to the vaccines we received in the past.

Previous vaccines contained the virus or parts of the virus and when injected, they stimulated an immune response to provide protection from that virus.

mRNA injections, on the other hand, introduce genetic instructions for a specific protein to give our bodies the instructions to produce the parts of the virus within our own cells.

I promised that you don't need to be a medical expert to understand this, therefore to put this in layman's terms, you just need to understand these 6 things:

1. mRNA injections are completely different to traditional vaccines

2. mRNA injections provide genetic instructions which can literally alter your DNA

3. DNA contamination has been found in Australian vials which exceed legal limits by up to 145 times and our regulators continue to ignore this

4. Since the introduction of the mRNA injections in 2021, there have been 143,220 excess deaths in Australia which is like two fully laden A380 aeroplanes crashing every week and killing all the passengers and there has been no investigation into the causes

5. The efficacy (effectiveness) of subsequent injections decreases with more injections and causes more damage to a person's immune system

6. Public Health and Safety ***is*** a local government concern and it's time to call for a thorough independent investigation into the mRNA injections, since it is affecting our Bundaberg Regional community

Why should you care about DNA contamination?

The DNA in each of our bodies is absolutely unique to us.

In essence, our DNA is the unique biological template for each of us.

Our DNA was inherited from our ancestors for thousands of years and is unique to us because it comes half from your biological father and half from your biological mother and so on as far back in your ancestry as you can imagine.

Until the 21st century, your body's natural defences were well equipped to counter potential interference with your DNA

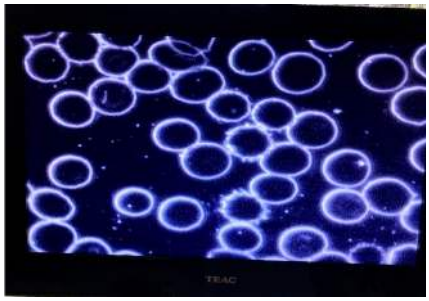
However, with the advent of the lipid nanoparticle technology incorporated into the Covid 19 shots (which effectively wraps up the mRNA elements – as well as any foreign DNA fragments present) this whole package is able to be delivered into the billions of cells in your body (potentially disrupting your unique DNA) with unpredictable health consequences - such as cancers and immunity disruption- as well as potential flow on disruption to your children, grandchildren and all other descendents.

Most people are blissfully unaware of what is going on in their bodies until they present with some medical condition. At that point, it's often too late for them. With turbo cancers (which have only appeared since the jab rollout) for example, people often die within weeks of their diagnosis. Sadly most people refuse to make the connection between their medical condition and these mRNA injections.

Unlike asbestos, this health risk is largely invisible unless you are willing to spend $80 for a live blood analysis to discover what's going on inside you.

To give you a better understanding as to why you should be concerned, I'd like to share some images of my own blood with you as seen under a microscope.

This is what normal looking blood cells should look like and what my blood looked like prior to the Covid injection rollout:



Now have a look at these images

Contaminated Blood September 2023

Contaminated Blood November 2023

Irrespective of your medical knowledge and understanding, I'd like to ask you: *do these objects look like they should be in your body?*

These non-human particles can be seen from a small pin prick of a finger. Imagine how many more of these objects are floating around all over your body and making their way into your organs.

Under the microscope you can see that these nanoparticles are often surrounded by white blood cells as they try to fight off these foreign particles. That in turn causes inflammation in your body. The more of these nanoparticles you have in your body, the more inflammation and the more oxidative stress you will experience.

I'm pleased to report that there are solutions for those who are willing to do some research and to follow the necessary detox protocols. I did another blood test exactly one month ago and was told my blood is about as healthy as it can be and that the large nanoparticles that I have just showed you, are gone.

Ladies and Gentlemen of this Council, I implore you to stop turning a blind eye to members of our families and this community who are silently suffering and dying. I ask you to acknowledge this health risk and show unusual compassion and courage by advocating for our community to the regulatory authorities and to higher tiers of government by calling for answers and solutions.

Specifically, I'm asking you to pass a motion to call on State and Federal Governments and health agencies to conduct thorough, independent investigations into the DNA contamination and related safety aspects of the Covid 19 injections in particular, and all mRNA injections in general, and to take the appropriate action in the interests of our community.

How can council spend hundreds of thousands of ratepayer dollars on a building it doesn't own in the interests of public health and safety without acknowledging the "**Elephant in the Room**" which is those in our community who are suffering bereavement from family members who have died or those who are suffering ill health following mRNA injections, or indeed the hidden suffering of those who were coerced into taking the injections and now live in fear of future ill health, infertility or genetic abnormalities carrying over into their descendants.

For you as our Councillors to feel content with yourselves for promoting health and fitness in our community, while ignoring this health issue quite frankly would be outrageous, irresponsible, negligent, and incredibly disrespectful to our community!

Council can and must demonstrate a moral duty of care to this community by taking action, and bringing an appropriate motion to the next Council meeting calling for a proper independent investigation into DNA contamination in mRNA injections.

We know that heart conditions such as myocarditis/pericarditis, blood clots, brain aneurysms, advanced alzheimer's, turbo cancers, infertility, autoimmune dysfunction, parkinson's disease and acceleration of existing illnesses are some of the suspected "smoking guns" from the shots.

If the ill effects and the causes can be clearly identified and understood, and necessary resources allocated, then we could be very hopeful that our scientists and health practitioners could find health solutions to help those sufferers.

We live in a society described as a democracy.

In a Democracy **no institution should be beyond scrutiny** – not our State or Federal Governments, not the TGA, not Health departments, not even this Council.

In a democracy we are entitled to and should be expected to ask questions, to demand checks and balances and accountability of those in positions of responsibility.

In a Council such as ours facing financial challenges, taking action on this issue should be a no brainer! .....it has no financial costs, requires negligible time allocation, has the potential to benefit almost every resident, and affords this Council a hero status in demonstrating care and compassion for its people.

This Council by supporting such a motion and joining those of other councils can have a voice for more than 100,000 of our residents and thousands of other Australians by

calling for answers to some very important questions affecting our Health and Wellbeing.

In closing I'd like to show you this short video from Professor Ian Brighthope

https://fb.watch/ybTeI6RG-8/**?**

Thank You
